

Autobiography

My name is Andrii Borysov. I was born on June 15, 1991 in Mykolaiv, Ukraine.

I have a family of three: my mother, my father and me. My father Yurii Borysov is 46 years old and mother Valentyna Borysova is 43 years old. My father is mechanic, my mother is an economist. They have been divorced since 1993. My mother and me very friendly.

I have many hobbies, some of them are: sport, travelling and reading. I have many friends all over the world. Time after time I communicate with them by Skype, Facebook or emails in English and Russian. I am honest, tolerant, hard working, highly motivated. Must to say that I had a lessons of kick-boxing during last year. I like it because with sport you become more courage, perseverance, confidence, purposeful and healthy.

I have always been interested on agriculture and horticulture because my grandparents have some pieces of land. They live in the village near the city and I often visit them to help. When I come we grow different vegetables, for example: potatoes, tomatoes, cucumbers, cabbage, pepper, carrots. Its so interesting for me. My grandpa have a orchard, its not so big but have a lot of trees: its apple, plum, cherry, apricot, peach trees. I like work on the field and orchard with my grandpa, he know so much about gardening and how take care about vegetables. So I always trying to get some new knowledge from him. Besides my grandpa have a small tractor, its was made by him self, I like drive it. My mother likes flowers and she always grows flowers in our flat. I helped my mother to plant different plants when I was a child. My grandparents yard is very beautiful place in spring and summer because all the flowers are in blossom.

Since 1991 our family has live in Bashtanka, Mykolaiv region. I started my secondary education in school №2 in 1999 and successfully finished it in 2009.

Then I entered Mykolaiv National Agrarian University where I am studying now. I study a lot of different subjects at the University such as English, Details of Machines, Agricultural Machinery, Food Processing, Economics and others. After each year of study I gain my practical training at various agricultural enterprises in my region. During summer time in the past I worked in the field. I am pick up bale of wheat on the truck. Some times I drove tractor and of course i have a licence on it. I worked there during summer. Its was great work experience in agriculture. Summer of 2012 I spend in USA. I worked in Big Top Tent Rentals Company. Its was not agricultures work but I think its was good working experience in abroad, Its was my first time. This Company situated in NY, Cairo. I worked there during 4 month between May and September. This company give in rental big different Tents and all equipment

what you need to celebrate big events. Company have tents different sizes, different kinds of chairs, dishes, lights, stages, dancefloors, tables. So we worked a lot, for about 12 – 17 ours a day. My duties there was: clean and wash tents, chairs, tables, load and unload all equipment in truck, installation tents, stages, dancer floors. Some times I drive truck or forklift but its was within shop. We have many orders in neighboring states. So I seen many sights.

I seen what they grows on their fields and what modern technique they use in agriculture. I am understand that in our country we don't have such technology. That's why I am decided next time work in agriculture. Because its very interesting for me and in the future I am planning work in this area in my country. Its my future profession. I am sure that USA is a modern country including agriculture and they have one of the best and innovative methods and technologies in the world. That's way I would be very glad if I got an opportunity to learn more about the agricultural sector of the USA. I hope to get acquainted with the USA culture and make new friends.

Faithfully yours

Andrii Borysov
